

Robin Reel

Springfield, MO | robin413@protonmail.com | (417) 209-6319 | github.com/robinpie | www.linkedin.com/in/robin-reel-436462220/

Security-minded IT and systems generalist who builds new tools when existing ones fall short.

Education

Bachelor of Science in Information Technology — Missouri State University, Springfield, MO Expected May 2027
IT Infrastructure Track (networking, cybersecurity, systems) Major GPA: ~3.75/4.0, Cumulative GPA: ~3.33/4.0

Certifications

- **CompTIA A+, CompTIA Network+, and CompTIA Security+** 2026
 - Stacked: **CompTIA IT Operations Specialist** and **CompTIA Secure Infrastructure Specialist** 2026
- **Fortinet NSE 1 - 3** April 2026
- **Cengage Microsoft Excel Advanced** December 2025
- **CompTIA SecAI+** Expected May 2026
- **Microsoft Azure Fundamentals (AZ-900)** Expected July 2026
- **CLA - C Certified Associate Programmer** Expected July 2026

Technical Skills

	Proficient	Familiar
Operating systems:	Windows desktop, Linux CLI	Windows Server, Linux desktop
Microsoft:	Intune, Entra ID (fka Azure AD), Office/365	Azure
Infrastructure:		VMware ESXi, SonicWall, Nmap, SQL Server, Git
Programming:	C, Bash scripting	Python, JavaScript/TypeScript (especially with React), SQL

Work Experience

- IT Intern** — Health Hub Clinic, Springfield, MO April 2026 - present
- **Averted a major compliance (RSMo. 334.097) violation by salvaging ~20 GB of radiology reports from a partially corrupted disk image; used xfs_repair for analysis and partial recovery, then manually repaired remaining corruption at the hex level by referencing an older known-good image**
 - Configured and deployed Intune compliance baselines and Entra ID Conditional Access policies for HIPAA enforcement for Windows, Office, and Teams
 - Extended protections to Teams on medical staff's non-managed personal Android and iOS devices using app protection policies
 - Migrated an off-site VPN-connected NAS to our on-site LAN as part of network simplification efforts, integrating with SonicWall and Windows clients
 - Documented our network environment when no documentation existed by using Nmap, inferring from SonicWall configuration, and user surveying
 - Discovered and fixed security issues during this process (e.g. internal interfaces exposed to internet, SMB signing disabled, EOS software running)
 - First contact for technical support for ~50 medical and administrative staff, working on Windows workstations, printers, and the network stack

Projects

- !~ATH** — Esoteric programming language December 2025 - April 2026
<https://github.com/robinpie/ath>
- Designed and developed a custom Turing-complete esoteric concurrent programming language where all control flow waits for entity death
 - Built two complete interpreters in Python and JavaScript (lexer/parser/async-event-loop), each with a stepping debugger and 400+ unit tests
 - **Demonstrated capability by simulating QUIC transport behavior in !~ATH for a networking class final project, including NewReno-style congestion control, SRTT/RTTVAR smoothing, dual loss detectors, PTO, and true QUIC-style retransmission across 4 multiplexed streams**

- Homelab Networking** May 2025, with minor ongoing upkeep
- Configured a segmented home network using VLANs on a managed switch; used a Wazuh SIEM instance to gather logs and identify anomalous traffic
 - Automated parsing and summarization of unsupported log sources using Python scripts, Bash scripts, and local LLMs (Qwen models)

- Xcaca** — X Window System server in ASCII art March 2026 - April 2026
<https://github.com/robinpie/xcaca>
- Implemented an X server in C built on the Kdrive/TinyX backend that renders graphical output as ASCII art in a terminal with no GPU required
 - Optimized rendering with a damage-driven render loop; added aspect-ratio correction for readable rendering in a variety of terminal sizes
 - Implemented keyboard and mouse support via evdev scancode translation, allowing for full interactive usage over SSH or locally

- ilo toki nasa** — language model trained on Toki Pona April 2026
- Trained a ~10M-parameter GPT-style decoder on a corpus of Toki Pona text using a smolGPT-style architecture and the Muon optimizer
 - Filtered and cleaned public corpora to create a corpus of high-quality Toki Pona with very little contamination from other languages or metadata

Open-source Community Involvement

- Arch User Repository** — Maintainer for seven packages (dinky, dinky-git, chessament-git, atlantik-git, hash-o-matic-git, localquens, kdominate-git)
 - Writing and maintaining build scripts with signature verification to securely deliver software to real Arch Linux users via Git-based distribution
- GitHub, GitLab** — Upstreamed features and fixes to others' projects, e.g. adding GPM mouse support to the Dinky terminal text editor
- Mozilla Pontoon** — Contributing to Toki Pona-language localizations for Firefox, Firefox for Android and other Mozilla products
- Manifold Markets** — Discovered and reported a double-spending bug in limit orders, earning a bug bounty reward
